

SPEKTRA Sanitol / Sanitol concentrate

USE

A colourless, biocide water-based agent for the sanitation/improvement of interior and exterior wall surfaces, which are attacked with mould or algae. It is suitable for the attacked surfaces, such as plasters, concrete, fibre-cement plates, plaster plates and wall surfaces, which are painted with dispersion paints.

CHARACTERISTICS

- Quick and efficient effect.
- For interior and exterior wall surfaces.
- Water-thinnable.

TECHNICAL DATA

PRODUCT TYPE	biocide preparation in water
COLOUR SHADES	transparent, slightly yellowish
TINTING	/
DENSITY	1,0 kg/l
THINNING	SPEKTRA Sanitol: thinning is not necessary SPEKTRA Sanitol concentrate: with water (1 part SPEKTRA Sanitol concentrate + 4 parts of water)
PACKAGING	0,5 l and 1 l
SHELF LIFE	The shelf life of the originally closed and suitably packed product (temperature from +5 °C to +35 °C, in dry place) is until the date indicated on packaging. IT SHOULD NOT FREEZE!

INSTRUCTIONS FOR USE

APPLICATION	brush, spraying
WORKING CONDITIONS	Temperature of paint, air and surface min. +5 °C.
DRYING (T= +20 °C, rel. hum. 65 %)	Let dry for 12 hours.
COVERAGE	Theoretical: 5–10 m ² with 1 l in 2 coats of thinned SPEKTRA Sanitol concentrate . Practical coverage depends on permeability and roughness of the surface.
CLEANING OF TOOLS	Immediately after use with water.

SURFACE PREPARATION

Do not clean the attacked surfaces mechanically (brushing, rubbing), as the mould spores are still alive and could also attack the healthy surfaces. Coat once the surfaces, attacked with mould with **SPEKTRA Sanitol** using a brush (or spray). Remove mould and the falling off particles mechanically from the dried surface, use spatula, wire brush, brush, or hot water under pressure. If the surfaces are heavily attacked, repeat the procedure, you may also use less thinned **SPEKTRA Sanitol concentrate**. You may paint cleaned and completely dry wall surfaces, treated with **SPEKTRA Sanitol** with **SPEKTRA Kitchen & Bathroom**, **SPEKTRA Termo Top** or any interior or facade paint **SPEKTRA** with the addition of **SPEKTRA Anti Mould**, which for longer period prevents the growth of microorganisms.

COATING SYSTEMS

SURFACE	SURFACE PREPARATION	IMPREGNATION	PUTTYING	TOP COAT
- surfaces, attacked with mould and/or algae such as concrete, plasters, surfaces painted with dispersion coatings	1–2x SPEKTRA Sanitol / Sanitol concentrate removal of mould, crumbly particles and repair of damaged spots with mineral masses	if necessary 1x SPEKTRA Impregnation Acryl Special / SPEKTRA Impregnation Acryl or 1x SPEKTRA deep impregnation	if necessary 2x SPEKTRA Level Medium	SPEKTRA Kitchen & Bathroom / SPEKTRA Termo Top / dispersion paint of the trademark SPEKTRA at choice (addition of SPEKTRA Anti Mould)

REMARKS AND SPECIFICS

- **SPEKTRA Sanitol / Sanitol concentrate** does not contain whites; therefore, it does not whiten the spots.
- **SPEKTRA Sanitol / Sanitol concentrate** is a very efficient biocide agent, which destroys also mould in the substrate, not only in the surface. It is **not suitable** as the additive to be added into paint for long-term prevention of mould growth. For this purpose, we use **SPEKTRA Anti Mould** as the biocide additive to dispersion paint.
- Do not mix **SPEKTRA Sanitol / Sanitol concentrate** with the biocide agents of other producers, nor with other household cleaners.
- We recommend using protection gloves and respiratory protection at spraying.
- Use biocides safely. Always read the label and product information before use.
